

A canna-coffe creamer recipe ...

***(really just canna-butter, that I
then freeze, and It surmise the
freezing is doing some
"conformational" molecular
rational thingy to the THC and
shit ... science, yay)***

How Dan makes his ABV, Canna-Coffee Creamer:

1. collect 1 oz of ABV (already been vaped) weed
2. you can crush the ABV further with mortar/pestal, but that's really not necessary.
3. Add 2 sticks of butter, and fill a medium boiling pot, that has a lid, to 1/4 full of water.
4. Add abv, butter, to water, set to 4 on your stove top. Little less than medium.
5. Let boil, adding a little water periodically, for 90-120 minutes.
6. Strain debris using cheeze cloth, strainer.
7. As you strain, pour into a container, with a lid.
8. Place container in fridge for 8-12 hours. Wait till the fats/butter is congealed at the top and is kind of hard.
9. Pull out of fridge, scrape nasty shit off butter ... reheat the butter, and the place in a second container. This should be a freezer safe container. Pour re-heated (crap cleaned off) butter into this container, place in freezer.
10. Wait till frozen, use sparingly.
