

Art and Science

by Daniel J. Sullivan

Pub Date: 08/24/11

Rev Date: 02/11/17

Art is something you pay for...

Art is part of the upper half of Maslow's Hierarchy.

Art is like beauty, is like love, is like what we want work to be.

Art is pleasure, nuff said.

Art is avant garde, destabilizing and ridden with entropy --> bleeding edge of new thought.

Art is also cheap, if one is willing to look, one can find it at any price.

Art is work, work should not be slavery... artists should be paid.

Art is something we should all create... We must all be artists, no matter what our roles in this tragedy...

Science should be free...

Science is the universal meme.

Science is the next stage of Philosophy (Russell and Dewey had it right).

Science is fuel for hope.

Science must never rule art, and art must never rule science.

Science should be free, but scientists should and MUST be rewarded, they are the stewards of hope and science is HARD WORK.

Art plays the game, science expands the playing field...

Art and science are in dynamic tension.

Science should flow through education to everyone.

Art should be allowed, expanded, protected and 'paid for' (not free) -- Art is the concrete manifestation of human creative freedom and should never be license for human slavery.

Neither art, nor science, are viable under tyranny – they become debased, deformed, diminished.

Art and science, like man, need not be ruled.
